

C55: Include

Type	Priority	Estimate	References
Functional	High	None	None
Automation Type	Is Automated		
None	No		
Labels			

Preconditions

- Open EasyDMARC SPF Record Generator page
- SPF Record Generator form is visible

Test Data:

Run the same steps for each of the following valid **include** mechanism values:

- \_spf.google.com
- spf.protection.outlook.com
- mail.zendesk.com
- amazonses.com

Additional data:

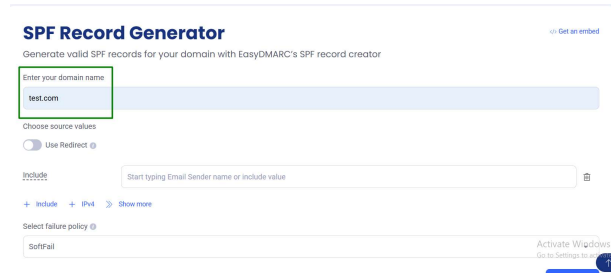

- Domain: test.com
- Failure Policy: SoftFail

Steps

1	Open the EasyDMARC <b>SPF Record Generator</b> page.	<p><b>Expected Result:</b></p> <p>The SPF Record Generator page should open successfully and load without errors.</p> <p><b>Screenshot:</b></p>
2	In the <b>Domain</b> input field, enter test.com.	<p><b>Expected Result:</b></p> <p>The <b>test.com</b> should be displayed in the Domain</p>

input field and no validation error should be displayed.

Screenshot:

3	For each valid include value listed in <b>Test Data</b> , enter the value in the <b>Include mechanism</b> input field.	<p><b>Expected Result:</b></p> <p>Each include value should be accepted and displayed in the <b>Include mechanism</b> input field without validation error.</p>
4	Observe the <b>Select failure policy</b> dropdown with its default value.	<p><b>Expected Result:</b></p> <p><b>SoftFail</b> should be selected in the failure policy dropdown.</p>
5	For each valid include value, click the <b>Generate</b> button.	<p><b>Expected Result:</b></p> <p>The SPF record output area should be displayed successfully for each valid include value.</p>
6	Review the generated SPF record output for each valid include value.	<p><b>Expected Result:</b></p> <p>For each valid include value, the generated SPF record:</p> <ul style="list-style-type: none"><li>• Host: <b>test.com</b></li><li>• Type: <b>TXT</b></li><li>• Value should start with <b>v=spf1</b></li><li>• Value should contain <b>include:&lt;entered_value&gt;</b> (matching the current include mechanism value)</li><li>• Value should reflect the selected SoftFail policy: <b>~all</b></li></ul>
