

C52: Domain Field Validation – Invalid Format

| Type | Priority | Estimate | References |
|-----------------|--------------|----------|------------|
| Functional | High | None | None |
| Automation Type | Is Automated | | |
| None | No | | |
| Labels | | | |

Preconditions

- Open EasyDMARC SPF Record Generator page
- SPF Record Generator form is visible

Test Data

Invalid domain examples to check:

- example
- exa mple.com
- .example.com
- example..com
- example@com
- -example.com
- example-.com
- example!.com

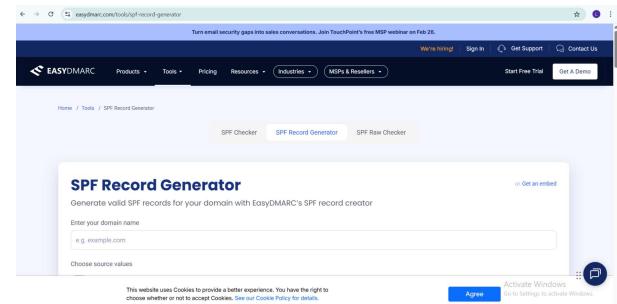

Steps

- 1 Open the EasyDMARC SPF Record Generator page.

Expected Result:

The SPF Record Generator page should open successfully and load without errors.

Screenshot:

- 2 For each invalid domain value listed in **Test Data**, enter the value into the **Domain** input field.

Expected Result:

- The 'Please provide a valid domain' validation error

Click outside the field/ Press Tab/ Click the Generate button to trigger validation.

- message should be displayed.
- The SPF generation cannot proceed until a valid domain is entered.

Screenshot:

A screenshot of a web application interface. At the top, there is a text input field with the placeholder "Enter your domain name". Below this, a smaller input field contains the text "example". Underneath the "example" field, a red error message box displays the text "Please provide a valid domain".
