

C54: Redirect Toggle Behavior

Type	Priority	Estimate	References
Functional	High	None	None
Automation Type	Is Automated		
None	No		
Labels			

Preconditions

- Open EasyDMARC SPF Record Generator page
- SPF Record Generator form is visible

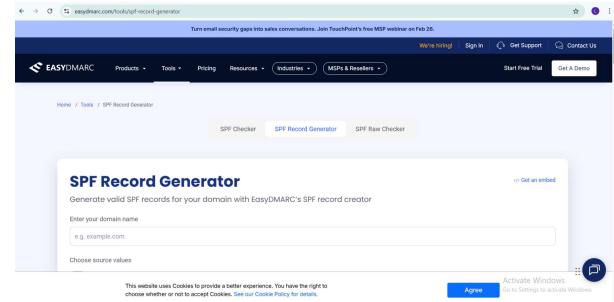

Steps

1 Open the EasyDMARC SPF Record Generator page.

Expected Result:

The SPF Record Generator page should open successfully and load without errors.

Screenshot:

2 Scroll to the Use Redirect toggle.

Expected Result:

The Use Redirect toggle should be displayed and should be unchecked by default.

3 Turn on the Use Redirect toggle.

Expected Result:

- The Use Redirect toggle should become checked.
- The Redirect input field should be displayed with its placeholder 'e.g. _spf.google.com mail.zendensk.com' value.

Screenshot:

The screenshot shows the 'SPF Record Generator' interface. At the top, there's a field labeled 'Enter your domain name' with 'e.g. example.com' as an example. Below it, a section titled 'Choose source values' contains a checkbox labeled 'Use Redirect' which is checked. A green rectangular box highlights this checkbox. Underneath, there's another section titled 'Select failure policy' with a dropdown menu set to 'Softfail'. A note below the dropdown says 'Note: if you are using redirect, the failure policy should not be chosen.' At the bottom right of the form is a 'Generate' button.

4 Turn off the **Use Redirect** toggle.

Expected Result:

- The **Use Redirect** toggle should become **unchecked**.
- The **Redirect** input field should be **hidden**.
- The form should return to its **default mode**.
